MMITS Project

App Name: 3 syllables

Project Overview			
Project Name			
Team Name			
Problem Statement			
General Objective			

Team Members			
Role	Name	Affiliation	Email

App Concept & Scope	
Key Features	

Target Users	
Required Data	

Key Milestones			
Milestone	Deadline	Status	Owner
Individual/Team Profile Submission	30 April 2026	Completed	
Concept Proposal Submission	11 May 2026	In Progress	
Development of Demo Versions	TBA		
Final Judging and Presentation	TBA		

#	IDEA	Category	Remarks	CHALLENGE OBJECTIVES			CONCEPT WORDS						KPI	
				1 [U]	2 [x]	3 [S]	traffic management [4]	parking management [5]	enforcement [6]	commuter information [7]	road infrastructure [8]	road safety [9]	KPI	How to measure
1	Vehicle-Specific Constraint & Incident Engine	Core Mobility & Intelligent Routing	Combined ideas 1 & 2 from MMDA Project	☒	☒	☒	☒	☐	☐	☐	☒	☒	Reduction in Stalled or Stranded Vehicles	percentage of users who successfully avoid routes marked as "Danger" for their specific Ground Clearance Baseline
2	Predictive "Trip Planner" & Smart Rerouting	Core Mobility & Intelligent Routing	Combined ideas 3 & 4 from MMDA Project	☒	☒	☒	☒	☐	☐	☒	☐	☐	Reduction in Average Travel Time & Bottleneck Volume	Estimated Clearance Time (ECT) of a blocked route against the actual time saved by users who follow the app's Smart Rerouting suggestions
3	Gamification Ecosystem	Behavioral Change & Sustainability	Idea 5 from MMDA ProjectSuggested name: Bagong gawi	☒	☒	☒	☐	☐	☐	☒	☐	☐	Volume of Sustainable Transport Shifts	-total number of "Green Commutes" logged by the system when passive telemetry detects a user switching from a private vehicle to public transit (MRT/LRT, bus, or ferry)
4	AI Mobility Assistant Chatbot	Core Mobility & Intelligent Routing	Idea 6 from MMDA ProjectSuggested name: Bagong gawi	☒	☒	☒	☐	☐	☐	☐	☐	☐	Pre-Trip Decision Engagement Rate	-track the total amount of Sustainable Mobility Points awarded and redeemed -the number of daily conversational queries handled by the AI regarding road status or route safety
5	Categorized "Smart Commute" Dashboard	Core Mobility & Intelligent Routing	Idea 7 from MMDA ProjectSuggested name: Bagong gawi	☒	☒	☒	☐	☐	☐	☐	☒	☒	Proactive Rerouting/Delay Rate	percentage of users who alter their planned departure time or switch their intended destination mode after viewing the consolidated weather, incident, and road construction dashboard
6	Hybrid "Anti-Fake News" Verification System	System Integrity & Data Privacy	1, 2, 3 and 4 from Project JICA MMITS	☒	☒	☒	☒	☐	☐	☐	☐	☐	Hazard Alert Accuracy & Rejection Rate	-speed (latency) at which a hazard hits the 3-5 user report threshold and is auto-flagged -measure the percentage of false reports successfully blocked by the AI Landmark Matching and cross-referenced passive telemetry
7	Offline Emergency & Resilience Mode	Resilience & Accessibility	1, 2, 3 from Project JICA MMITS and suggested 4	☒	☒	☒	☐	☐	☐	☐	☒	☒	Offline Accessibility and Safe-Zone Utilization	- number of successful SMS-based status queries processed by the Flask API gateway during periods of extreme weather or network outages - track the number of users successfully guided to mapped Unloading/Loading safe zones
8	Privacy by Design (Segment-Only Tracking)	System Integrity & Data Privacy	5, 6, 7, 8 from Project JICA MMITS	☒	☒	☒	☐	☐	☐	☐	☐	☐	Data Anonymization Success Rate	guaranteeing that 100% of tracked trips successfully execute "Start-End Masking" (automatically deleting the first and last 200 meters of a trip) to ensure zero Personal Identifiable Information (PII) or exact home addresses are ever logged to the server
9	"Social KYC" and Commuter Identity Binding	System Integrity & Data Privacy	to protect gamification from idea 3, KYC and 4	☒	☒	☒	☐	☐	☐	☐	☐	☐	Reward Ecosystem integrity	ratio of fully verified "Social KYC" accounts (those bound by OTP, device fingerprinting, and a linked digital wallet) versus unverified accounts

1	The "Vehicle-Specific Hazard" Flow				
	Supplier	Input	Process	Output	Customer
	MMDA & JICA	> IoT Flood Data & Official Datasets	> Flask Backend Cross-Referencing vs. Vehicle Profile	> Personalized Hazard Status (Passable/Danger)	> Private Vehicle Drivers
2	The "Anti-Fake News" Crowdsourcing Flow				
	Supplier	Input	Process	Output	Customer
	Road Users & Smartphones	> Crowdsourced Reports & Passive Telemetry (G-sensors)	> Tier 1 to 3 Automated Verification (3-5 report threshold & AI Image Check)	> Instant Segment Notifications (via FCM)	> All Target Commuters
3	The "Smart Rerouting & TDM" Flow				
	Supplier	Input	Process	Output	Customer
	MMDA/JICA Data Dashboard	> Travel Time & Road Crash Data	> Estimated Clearance Time (ECT) Prediction	> Smart Rerouting & Inter-Modal "Nudges" (to MRT/Ferry)	> MMDA & Local Government Units (by reducing congestion)
4	The "Go Green Gamification" Flow				
	Supplier	Input	Process	Output	Customer
	Smartphones/Devices	> Segment-Only Tracking (Detecting shifts to public transit)	> Gamification & Reward Processing	> Sustainable Mobility Points	> Public Transit Commuters
5	The "Offline Emergency" Flow				
	Supplier	Input	Process	Output	Customer
	Telco Partners & Road Users	> SMS Queries (e.g., "STATUS TAFT")	> Flask API Status Retrieval	> Text-based Hazard Status Replies	> Stranded Commuters without Mobile Data

[1] Promote innovation in the application of ITS and digital technologies that encourage behavioral change and support sustainable travel choices;

[2] Foster collaboration among students, professionals, government agencies, and industry stakeholders in developing people-centered, technology-driven mobility solutions;

[3] Increase awareness of the role of behavioral change and technological innovation in improving road safety, reducing congestion, and advancing sustainable urban mobility in Metro Manila; and

[4] Traffic Monitoring
Traffic Bottleneck Monitoring
Traffic Signal System
Travel Time Monitoring

[5] Smart Parking Finder
Illegal Parking Detection and Reporting

[6] Road Clearing
Traffic Violation Monitoring
No-Contact Apprehension Policy
Number Coding

[7] Trip Planning

[8] Road Construction Works
Unloading / Loading Zones

[9] Road Crashes Monitoring
Road Emergency Response
Pedestrian Safety
